

## **OIBSIP\_DataScience\_Task1**

### **Iris Flower Classification**

#### **Objective**

The objective of this project is to classify iris flowers into different species based on their sepal and petal measurements using Machine Learning techniques.

#### **Dataset**

The Iris dataset contains measurements of iris flowers from three species:

- Iris Setosa
- Iris Versicolor
- Iris Virginica

#### **Tools and Technologies**

- Python
- Pandas
- NumPy
- Matplotlib
- Seaborn
- Scikit-learn
- Jupyter Notebook

#### **Steps Performed**

1. Data Collection
2. Data Cleaning
3. Exploratory Data Analysis
4. Feature Selection
5. Model Training
6. Model Evaluation

#### **Results**

The model successfully classified iris flower species with high accuracy.

#### **Conclusion**

Machine learning algorithms can effectively classify flower species using petal and sepal measurements.
